

# HUMMINGBIRD FOOD

I'm sorry if you think this is a decadent desert, but it actually is food for hummingbirds. The stuff you buy at the store is unreasonably expensive and has an annoying red color. The ratio of 4 water to 1 sugar closely replicates the nectar the birds are used to in nature. This couldn't be easier, and the hummingbirds will bring you good luck.

## INGREDIENTS:

1 Cup Water

¼ Cup Sugar

## DIRECTIONS:

Combine all ingredients in a pan and bring to a boil for 2 minutes. This removes the chlorine and kills mold spores and bacteria.

Allow to cool to room temperature and fill your feeder.
